Concept

There has always been a curiosity about outer space. Research efforts by NASA (National Aeronautics and Space Administration) in joint effort with Space-X might just take us on a mission to Mars. Whether this occurs or not, it's time to develop some supporting graphic materials to help solicit contributions from sponsors. An assortment of images and text will be provided for use in this project.

Task to complete:

Create a website about the pending "Journey to Mars".
Include a "landing page" (the opening page), four content pages that include text and images, and page that features a form to solicit donations to fund the project.

Criteria

Obvious use of design concepts: Contrast, Repetition, Alignment, and Proximity to provide continuity throughout the site.

Mix of images and text appropriate to convey the information.

Appealing design and color palette appropriate for conservative potential sponsors.

Typography: Use of dominant and subordinate type sizes for headline, subheads, body text.

 6 Linked pages as described above.

Software Use
& Output

You are free to use any software currently installed on the computer. You may not install any programs or plug-ins.

Leave the file open on your screen using **only your contestant number** to identify it. **Use of your name or school on any materials will disqualify your entry**.
